INSPECTIONS THAT DELIVER *CONFIDENCE & PEACE OF MIND*

FIRE SYSTEM INSPECTION WITH DISRUPTION-FREE COMPLIANCE

Our qualified inspection team checks your fire safety equipment without disruption to your process or personnel. We can customize our services to fit your operational needs while remaining cost-effective. Knowing that your system is compliant with all codes and will function properly in an emergency provides peace of mind.

COMPLETE FIRE PROTECTION

Protecting People & Property for more than 60 Years

Code Compliance is Key

All fire alarm systems, sprinklers systems, and suppression systems are required to be inspected and re-certified on an annual basis, or more frequently as required, pursuant to the NFPA and local fire codes and standards.

Excellence Through Training

The more our technicians know, the safer you are. For that reason, Keystone requires all of our field employees to complete in-house training, both in our hands-on skills lab and through our online learning management system

Harnessing Technology

Our process has been refined over the years to help make the inspection of your fire system easier for you. Our technicians capture all inspection data on electronic tablets, and paperless reports are available at the completion of our inspection.

KEYSTONE CLIENT CONNECT™

We also provide a customer web portal for your convenience – Keystone Client Connect™ – for easy retrieval of information. You're just a mouse-click away from having access to inspection reports, invoices, service call reports, and more.
