Mass Notification Solutions

Is Your Organization Prepared For An Emergency?

If your building had an emergency, how would occupants be notified? The need for mass notification systems was magnified in the tragic events of 9/11. Since then, with every disastrous event, these systems have become increasingly important in saving lives.

Fully redundant, failover mass notification systems should be an essential part of your security plan. A single system cannot be relied on to provide critical messages for emergency situations.

A Unified Approach

Connecting your security, fire, public address, and messaging systems together provides full coverage for any type of emergency. Voice evacuation, digital signage as well as mass email and text messaging are combined for an effective mass notification system.

Since 1975, organizations of all sizes have trusted Keystone Fire and Security to keep their people and property safe. When it comes to security and communications solutions, you can count on Keystone Fire and Security.
